I. INTRODUCTION

1. I have been engaged by Raquel Camps, Eduardo Cappello, Alicia Kruger, and Marcela Santucho ("Plaintiffs") in Camps et al. v. Bravo, Case No. 1:20-cv-24294-KMM (S.D. Fl.), to present my expert opinion on issues related to forensic pathology.

2. I offer the following expert report containing a statement of expected testimony, the reasons for this testimony, and any data and other information and materials considered in forming my expert opinion and testimony. I also provide information regarding my qualifications as an expert on forensic and clinical pathology. I also describe my prior expert testimony, and confirm I am not receiving compensation for my participation in this matter.

II. QUALIFICATIONS

3. As an Associate and Chief Medical Examiner in North Carolina, California, Georgia, & Florida, I have performed over 8000 autopsy and clinical patient examinations in medicolegal cases and have been involved in testimony in over 600 cases in both the criminal and civil justice systems over the last 35 years. Additionally, in my capacity as a practicing hospital pathologist, I have been involved with both the clinical laboratory and surgical pathology, and the information processing and data transfer aspects in both the in-patient and out-patient settings. I have also developed a series of educational modules to be utilized by various members of the trauma team across various hospitals—including EMS, trauma nurses and physicians—addressing the application of injury pattern analysis to patient evaluation, care, and treatment in the clinical setting.

4. I served as a clinical instructor at Emory University School of Medicine from 1978-1980 and clinical assistant professor at SUNY, Stony Brook from 1987-1988. I also served as

1

president of the Atlanta Pathology Society from 1984-1985, and director of the Medical Education & Forensic Training Program at the Office of the Medical Examiner, District 9, in Orlando, Florida. I have also served in an educational capacity within various hospitals, such as with the Department of Pathology at Orlando Regional Healthcare Systems in Orlando, Florida from 1990-1999, and the Department of Surgery, Division of Trauma at Orlando Regional Healthcare Systems in Orlando, Florida from 1999-2002.

5. My professional affiliations include the National Association of Medical Examiners, the College of American Pathologies, the US-Canadian Academy of Pathology, the American Academy of Forensic Sciences, and the American Medical Association.

6. My areas of research include medicolegal considerations in surgical pathology, laboratory medicine & treatment outcomes; clinical forensic medicine and clinical evaluation of injury patterns from the standpoints of mechanism and outcome; effective utilization and quality assurance in medical laboratory diagnostic testing and interpretative procedures, including pointof-care testing; the role of the pathologist in the clinical determination and evaluation of patient outcomes; injury pattern analysis and clinical forensic medicine; and forensic sciences applied to the clinical arena (education, diagnosis, and treatment issues). I have published more than thirty articles, reports, and books in these and related areas, including those I have presented in the course of various conferences and seminars. My work has been published in, among other journals, Forensic Science & Legal Medicine, Trauma, Annals of Neurology, and Journal of the Georgia Trial Lawyers Association. I have also presented my work at the International Academy of Pathology, the American Academy of Forensic Sciences, the Atlanta Pathology Society, the US & Canadian Academy of Pathology, the International Association of Forensic Sciences, the National Association of Medical Examiners, and the World Congress of Medical Law.

2

7. I obtained a medical degree from the University of Miami School of Medicine in 1968. Thereafter, I completed my three residency programs: first, in anatomic pathology from 1968-1970 at Strong Memorial Hospital, in connection with the University of Rochester School of Medicine; second, in cardiac and clinical pathology from 1973-1974 at Duke University Hospital in connection with Duke University School of Medicine; and third, in forensic and clinical pathology from 1974-1976 at University of North Carolina Medical Center in connection with the University of North Carolina School of Medicine. I received my board certification in anatomic and forensic pathology in 1976, and in clinical pathology in 1980.

8. I attach my *curriculum vitae* as **Exhibit 1**.

9. The list of cases since 2016 in which I have served as an expert and provided deposition testimony is attached as **Exhibit 2**, and the list of those in which I have served as an expert witness at trial is attached as **Exhibit 3**.

III. COMPENSATION

10. I am not being compensated for this expert report, except to reimburse me for reasonable expenses incurred while fulfilling my role as an expert. My opinion is not conditioned upon any payment.

IV. EVIDENTIARY BASIS OF OPINION

11. In preparing this report, I relied on my personal knowledge, and professional expertise and research into anatomic, forensic, and clinical pathology. I submit this report in my capacity as an academic and expert in these fields. This report is based on my medical knowledge and professional experience, and what I believe to be true given the facts of the case.

12. A list of materials I relied on in preparing this report is attached hereto as **Exhibit 4**.

V. SCOPE OF THE REPORT

- 13. I have been asked to address the following questions:
 - a. Whether the conclusions drawn by Dr. Julio Cesar Ulla in observing Jorge Ulla's body after the events of August 22, 1972 were consistent or inconsistent with the photographic evidence?
 - b. Whether, based on my review of the autopsy, medical reports, death certificates, and related summary documents, for the victims, any medical conclusions identified therein seem reasonable to me, and whether I can draw any further conclusions from these reports and the other materials provided to me?

VI. OBSERVATIONS AND CONCLUSIONS OF JULIO ULLA

14. Dr. Julio Cesar Ulla ("Ulla"), brother of one of the victims of the shootings in the Almirante Zar Naval Base on August 22, 1972, Jorge Ulla ("Jorge"), provided the following sworn statements during his deposition testimony on May 14, 2021:

- a. On August 23, 1972, Ulla observed Jorge's body for the first time after the shootings. He observed that Julio's "body was naked and was covered with blood, as well as dirt and pebbles as if he had been drug along the ground." He also observed that "there was a bullet hole in his right thigh, as well as another bullet hole under his left nipple."¹
- Based on Ulla's medical experience, he concluded that the thigh wound was "a clean wound made from a distance and it was not deadly."² He concluded from

² See id. at 51:22-23.

observing the "gunpowder halo" around the chest wound that it "indicated pointblank or short range shot."³

- c. Later that same day, Jorge's body was transferred to his father's apartment for a wake, during which a man named Marcelo Gutierrez took photographs of Jorge's body, which Ulla observed.⁴ Jorge's chest wound was visible in these photographs.⁵
- d. Ulla subsequently consulted with a forensic doctor and specialist at the José Maria Cullen Hospital in 1980, with whom he shared these photographs.⁶ The doctor's opinion of the wound was that it was caused by "a gun that was shot directly touching [Jorge's] body."⁷

VII. THE MEDICAL REPORTS OF THE TRELEW MASSACRE VICTIMS

A. Necropsy Report of Rubén Pedro Bonet

1. A necropsy report of victim Rubén Pedro Bonet was documented in <u>Trelew: La patria fusilada</u> written by Francisco Urondo.

2. A necropsy is synonymous with an autopsy. Like an autopsy, a necropsy is an examination of a body after death, or post-mortem, undertaken to determine cause of death.

3. Bonet's body was exhumed on October 20, 1972.⁸ On October 26, Doctors Jacinto Ignacio Pagliera and Mariano Manuel Balverde, forensic doctors of the National Justice System in Argentina, conducted the autopsy of Bonet. Doctor Rolbider Feola, anatomist and pathologist appointed by Mrs. Bonet, also attended.⁹

4. The expert necropsy (i.e., autopsy) report made the following observations regarding the body of Bonet:

- a. Bullet wound in the chest and right arm.
- b. Wound in the abdomen by bullet entering close to the navel and exiting by the back through a hole located on the same side and approximately at the same height.
- c. Hematoma around both eyes and the nose.
- d. Wound in the head by bullet entering close to the left ear and exiting above the eyebrow on the same side.
- e. Immediate death due to brain injury.

⁸ See Exhibit 7, Rubén Necropsy Report at 207.

⁹ See id. at 208.

5. From these observations, the report concluded that "the aggressor's position regarding the shots to the chest, the arm, and the abdomen differs from that of the head wound. The first ones are successive wounds when the individual was standing. These shots, with the aggressor sited on the left and in front of the victim, made the victim turn to the right and fall to the floor. The last shot, the one to the head, was received when the subject's head was slightly tilted forward and the position maintained, and the aggressor was 'on the left of the fallen victim' shooting 'from above and slightly forward." According to the report, the hematoma around the eyes and the nose "indicates that the lowest point of the head, where the blood drained when the subject was alive, was the upper region of the face, that is, the point of support on the floor was this area." Additionally, the wound on the forehead "corresponds to the exit hole of the bullet that entered close to the ear," supported by the fact that the bullet was deformed when exiting. "This indicates that the subject's head was resting on the floor, since the bullet was deformed before exiting when it clashed against the resistance opposed by the bone and the floor." The last bullet travelled "from behind and went forward, from the bottom upwards, and from left to right."¹⁰

6. Likewise, the report concluded that the "last bullet was shot from a short distance to finish him off. This is fully demonstrated by the fact that only in the wound situated close to the left ear (entrance hole) can 'a scant amount of medium size, small, and fine blackish gunpowder grains be observed" in the microscope."¹¹

B. Report of examination of Susana Lesgart

¹⁰ See id. at 208-09.

¹¹ See id. at 209.

1. According to this report, the body of Susana Lesgart was examined on August 23, 1972 for identification purposes by her brother Dr. Rogelio Lesgart, and two of his colleagues. During this examination, he observed "a bullet hole in the front of the left hemithorax, with an area that seemed to him a tattoo, that is, an indication that such bullet had been shot from a distance of no more than 30 cm [11.8 in]."¹²

According to the report, the body was subsequently examined on August
 24, 1972 by Dr. Eduardo Ricardo Yofre.¹³ His report made the following findings
 with respect to Lesgart's body:

- a. "The face and the neck showed a marked degree of bloating and cyanosis, which contrasted with the normal cadaveric pallor of the rest of the body. There was evidence of bleeding from the nose and both ears. The hair on the back of the skull presented a great amount of clotted blood that made it impossible for us to determine if the origin of the blood was in the vicinity, or if it came from a distant site. When trying to reduce the palpebral edema in order to see the eyeball from the inside, we noticed that the swelling was the product of subcutaneous emphysema, with a certain degree of tension as decompression was followed by the immediate restoring of the emphysema."¹⁴
- b. "There were five bullet holes in various parts of the body...with different types of edges, be it because they were entry and exit bullet holes, or because they were shot by different weapons. A nonphysician person who helped move the corpse said he had observed a sixth hole in the right lumbar fossa."¹⁵
- c. The various bullet holes are further detailed as follows¹⁶:

¹² See Exhibit 8, Report of examination of Lesgart corpse at 1.

¹³ See id.

¹⁴ See id.

¹⁵ See id.

¹⁶ See *id.* at 2.

- "Bullet hole at the height of the second intercostal space close to the left sternal border, of sharp contour and an approximate diameter of 0.8 cm [0.31 in]. Next to it, above its left border, an area of about 2.5 cm by 2 cm [0.98 in x 0.78 in] was observed, and looked like a necrotic skin lesion, black and cardboard-like, suggesting the same shot as the cause. In that case, it could have been a shot from a distance of no more than 30 cm [11.8 in]."
- "In the right lower quadrant of the abdomen, another bullet hole of similar size and characteristics to the above was leaking gas, which we interpreted as originating in an intestinal perforation."
- "On the upper section of the left shoulder, two bullet holes differed from those already mentioned in that their borders were irregular and they were larger than the above."
- "We discovered the fifth bullet hole in the inner part of the left arm, about six cm [2.36 in] underneath the axillary fold and with an irregular edge like those of the shoulder. We mention that a non-physician observer noted another hole he placed in the right lumbar fossa. However, given the difficult conditions in which the examination was undertaken, we did not see it."
- "Lastly, the hands and part of the body showed remains of the black ink habitually used for the purpose of fingerprint individualization. Due to its presence, we were especially careful in trying to remove it in order to touch the necrotic area described in [the first point above], confirming that it was not a spot produced by this ink, but rather a lesion with the characteristics we have described. With the assistance of the two employees of the Despontin House, we placed the corpse of Susana Lesgart in a new coffin. The technician immediately proceeded to weld the metallic lid closed."

C. Report of medical examination of Humberto Adrian Toschi

1. On August 23, 1972, Dr. Rafik Antonio David examined the body of Humberto Adrian Toschi and made the following statement: "The body shows two wounds made by a regular-caliber bullet in the left area of the abdomen, one wound at two fingerbreadths of the navel and the other wound at four fingerbreadths under the first one; both lack an exit hole. Besides this, several bruises were found in areas of the left shoulder, right knee, and especially a maceration of the index and middle fingers of the right hand. I let it be known that the corpse is in an advanced stage of decomposition, and I therefore suggest it [sic] be welded and closed completely."¹⁷

D. Report of medical examination of Miguel Angel Polti

1. Dr. Arturo Guillermo Roque partially examined the body (i.e. in the coffin) of Miguel Angel Polti on August 24, 1972 and made the following report: "Today, the corpse of Miguel Angel Polti (junior) was examined inside the coffin. We observed three bullet holes in the following places: one in the left shoulder, supraclavicular; another one in the left inguinal region, almost at the level of the fold of the same name; and the third one on the left side of the abdominal region, in the area of the flank, approximately at the height of the navel. Since the examination was incomplete, no other details were observed and no exit holes were noted; the back of the corpse was not observed, as it would have meant taking the corpse out of the coffin."¹⁸

¹⁷ See Exhibit 9, Report of medical examination of Humberto Adrian Toschi at 1-2.

¹⁸ See Exhibit 10, Report of medical examination of Miguel Angel Polti.

VIII. THE DEATH CERTIFICATES OF THE TRELEW MASSACRE VICTIMS¹⁹

A. Death Certificate of Humberto Adrián Toschi

1. The death certificate reads that Humberto Adrián Toschi's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

B. Death Certificate of Miguel Ángel Polti

1. The death certificate reads that Miguel Ángel Polti's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 9:45am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

C. Death Certificate of José Ricardo Mena

1. The death certificate reads that José Ricardo Mena's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

D. Death Certificate of Clarisa Rosa Lea Place

¹⁹ See Exhibit 11, Death Certificates of the Massacre Victims.

1. The death certificate reads that Clarisa Rosa Lea Place's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

E. Death Certificate of Alejandro Jorge Ulla

1. The death certificate reads that Alejandro Jorge Ulla's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

F. Death Certificate of Humberto Segundo Suárez

1. The death certificate reads that Humberto Segundo Suárez's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

G. Death Certificate of Mariano Pujadas

1. The death certificate reads that Mariano Pujadas's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

H. Death Certificate of Alberto Carlos Del Rey

1. The death certificate reads that Alberto Carlos Del Rey's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

I. Death Certificate of Eduardo Adolfo Capello

1. The death certificate reads that Eduardo Adolfo Capello's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

J. Death Certificate of Carlos Heriberto Astudillo

1. The death certificate reads that Carlos Heriberto Astudillo's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

K. Death Certificate of Susana Lesgart

1. The death certificate reads that Susana Lesgart's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

L. Death Certificate of Maria Angélica Sabelli

1. The death certificate reads that Maria Angélica Sabelli's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

M. Death Certificate of Mario Emilio Delfino

1. The death certificate reads that Mario Emilio Delfino's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

N. Death Certificate of Ana Maria Villarreal

1. The death certificate reads that Ana Maria Villarreal's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 3:30am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

O. Death Certificate of Ruben Pedro Bonet

1. The death certificate reads that Ruben Pedro Bonet's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 12:55am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area. P. Death Certificate of Alfredo Elias Kohon

1. The death certificate reads that Alfredo Elias Kohon's death was recorded on August 23, 1972 as occurring on the Almirante Zar Naval Base at 5:55am on August 22. Dr. Lisandro Iván Ricardo Lois issued the diagnosis as "violent death," and the certificate was registered according to a statement given by Dante Bautista, acting under orders of the Commander of the Rawson Emergency Area.

IX. CONCLUSIONS

A. Observations and Conclusions of Jorge Ulla

From the review of the photos and descriptions of the injuries to Jorge Ulla, it can be concluded that the wound to the upper abdominal area shows the presence of both soot material created by the firing of the weapon in close proximity to the skin and the thermal effects expected from a near-contact or close-range gunshot wound (where such range is generally within 20 inches).

The other described injuries are consistent with multiple gunshot wounds but there is no photographic documentation of those wounds.

B. Conclusions of Autopsies

In examining the described injuries to the other victims, including Ruben Bonet, Susana Lesgart, Humberto Toschi and Miguel Polti, it is clear that if these accounts are accurate, all were subjected to multiple gunshot wound injuries that were responsible for the deaths of each of these individuals.

One of the described wounds to Ms. Lesgart indicates the presence of 'tattooing' which is the result of burning gunpowder from the gun barrel striking the skin and creating multiple small areas of burning—a finding that indicates the gun was at a relatively close range when the projectile was fired, probably no more than 20 inches distant. The presence of tattooing is discernible from visual inspection and does permit inferences regarding the proximity of the gun. The observation by Dr. Eduardo Ricardo Yofre regarding the skin lesion being "black and cardboard-like" appears consistent with and in the same location as the "tattoo" observed by Dr. Lesgart; such description may represent soot, as also observed on the body of Jorge Ulla.

In regards to the information provided for the examination of Mr. Bonet, similar constraints exist as to evaluation without photographs of the various wounds. I understand from counsel that the original autopsy for Mr. Bonet cannot be found, as it was lost when Ms. Bonet fled the country. I understand from counsel that the prosecutor in the criminal trial in Argentina searched unsuccessfully for the original necropsy report and that the office of forensic pathology likewise could not find it. I also understand that Alicia Bonet has indicated that the summary of the report contained in Urondo's La patria fusilada reflects her recollection of the official report, and that Urondo had access to the official report. Although I cannot draw any independent conclusions in the absence of a full and official report, assuming the accuracy of the summary I have reviewed, it would have been possible for Doctors Jacinto Ignacio Pagliera and Mariano Manuel Balverde—who conducted the autopsy—to conclude from the information they reviewed (such as the presence of gunpowder) that the shot to the head was within close range.

With respect to the medical examination report for Mr. Toschi, although I cannot draw any independent conclusions, it would have been possible for Dr. Rafik Antonio David to visually identify the two bullet wounds in the left area of the abdomen (with their respective proximities from the navel) as well as the bruises in the left shoulder, right knee, and right hand of the body.

With respect to the medical examination report for Mr. Polti, although I cannot draw any independent conclusions, it would have been possible for Dr. Arturo Guillermo Roque in his partial examination to visually identify the three bullet wounds (one in the left shoulder, supraclavicular; another one in the left inguinal region; and the third one on the left side of the abdominal region, in the area of the flank, approximately at the height of the navel).

In my opinion, and although I draw no independent conclusion here, it is possible to determine the existence of a "kill shot" (i.e., a shot responsible for causing death) during an autopsy based on the location of bullet wounds. It is further possible to glean the proximity of the gun to the body based on the existence of tattooing and other indicators, as discussed above.

C. Consistency of Death Certificates with Medical Autopsies

Examination of the Death Certificates from all victims indicated that the causes of death in each was listed as 'violence' and consistent with gunshot wounds although not specified in each case.

Professional experience (cont'd):

As Associate & Chief Medical Examiner in North Carolina, California, Georgia, & Florida, I have performed over 7000 autopsy & clinical patient examinations in medicolegal cases and have been involved in testimony in over 300 cases in both the criminal and civil justice systems.

Professional experience(cont'd):

As a practicing hospital pathologist, I have been involved with both the clinical laboratory and surgical pathology, and the information processing and data transfer aspects in both the in-patient and out-patient setting. The laboratory network in northern Georgia encompassed two major base hospitals, and a series of satellite hospital laboratories providing local and referral services. In addition to director of clinical chemistry, this included management of laboratory personnel, coordination of all phases of testing services--from collection to issuing reports--, and physician educational activities related to effective utilization of laboratory services.

In association with the surgical trauma service at Orlando Regional Medical Center, a comprehensive program in clinical forensic medicine has been developed. Utilizing the data gathered from non-surviving trauma patients, in a prospective manner, through an extensive educational and consultative interactions with providers at all levels of the trauma care system.

The injury pattern information is used by the clinician to better appreciate the distribution of damages that might be expected in specific types of patient trauma situations, and improve the effectiveness of various diagnostic and therapeutic approaches--ultimately having a positive effect on patient outcomes.

As a consultant in legal medicine & forensic pathology, I have studied extensively injury patterns caused by physical, chemical & environmental agents, both from the standpoint of changes in tissues & organ systems, as well as to the determination of specific causeand-effect relationships. This approach has been helpful in delineating pathologic changes as they relate to patient outcomes-- including the efficacy of diagnostic testing, the appropriateness of therapeutic procedures, and other patient care issues encountered in the risk-management setting.

In developing the areas of clinical forensic medicine & telemedicine, the focus has been on conveying information through the utilization of visual imaging techniques, including photography, digital imaging, as well as videotaping--with the ultimate application of these techniques in direct real-time image transmission. This approach has resulted in the presentation of many seminars to physicians, nurses, EMS, and other providers of trauma care--including an ongoing workshop presented for 7 years at the annual meeting of the American Academy of Forensic Sciences, authoring of the textbook "<u>Forensic Sciences</u> <u>in Clinical Medicine</u>", as well as visual evidence presentation in court.

In order to address the increasingly prevalent problem of handling specimens and other items of evidentiary importance in the hospital and other clinical patient situations, an educational packet was developed. This is presently being marketed to forensic nurses and hospitals, and is intended to be part of an integrated specimen management system.

Professional experience(cont'd):

I have developed a series of educational modules to be utilized by various members of the trauma team--including EMS, trauma nurses and physicians--addressing the application of injury pattern analysis to patient evaluation, care, and treatment, in the clinical setting. These modules are primarily visual images, presented as 35mm slides & videotape--and will ultimately be available on a CD-ROM format.

As consultant pathologist to several tissue & organ procurement organizations, I am presently developing an intra-operative video system protocol to allow forensic pathologists to remotely evaluate potential organ donor candidates by viewing external and internal injury patterns--thereby giving them an opportunity to document evidence of injury prior to the introduction of artifact during the harvesting operation.

In my capacity as a clinical physician in the evaluation of sexual assault and pediatric trauma patients, I have been involved in documentation of clinical findings utilizing an visual format--both through still-photography and video imaging. As with the organ donor patients, all the formats & techniques have been developed, with the final step of real-time video transmission to be instituted in the near future.

RUBEN PEDRO BONET Necropsy Report

Bonet's widow sued the State over the homicide of her husband, thus starting the trial titled "LELCHUK, widow of Bonet, Alicia Noemí vs. the NATIONAL STATE (Command-in-Chief of the Navy) for damages." The lawsuit was filed in Court of First Instance N° 6 for Federal, Civil, and Commercial Matters under Doctor Jorge O. Arana Tagle, Clerk's Office N° 18 under Doctor Elsa Beatriz Guerisoli. Upon the plaintiff's request and the judge's decision, an autopsy of the cadaver was ordered.

Pergamino, October 20, 1972.

The remains of Rubén Pedro Bonet were exhumed. Only some flowers and two letters scribbled with their children's drawings, signed Mariana and Hernán, had been placed on top of the coffin. The exhumation was witnessed by the uniformed police staff who guarded the coffin when it was moved to the Federal Capital.

On the 26th, Doctors Jacinto Ignacio Pagliera and Mariano Manuel Balverde, forensic doctors of the National Justice System, carried out the autopsy of Rubén Pedro Bonet. Doctor Rolbider Feola, anatomist and pathologist appointed by Mrs. Bonet, also attended to witness the act.

From the expert necropsy report, the following basic points emerge (Autopsy N^o 2378; pages 72/78 of the aforementioned writs):

1. Cadaver in an advanced state of putrefaction.

2. Bullet wound in the chest and the right arm.

3. Wound in the abdomen by bullet entering close to the navel and exiting by the back through a hole located on the same side and approximately at the same height.

4. Hematoma around both eyes and the nose.

5. Wound in the head by bullet entering close to the left ear and exiting above the eyebrow on the same side.

6. "Immediate death due to brain injury" (page 78) (Conclusion "d" of the Police).

Autopsy findings and specially the cited data provide absolute certainty in asserting that the aggressor's position regarding the shots to the chest, the arm, and the abdomen differs from that of the head wound. The first ones are successive wounds when the individual was standing. These shots, with the aggressor sited on the left and in front of the victim, made the victim turn to the right and fall to the floor. The last shot, the one to the head, was received when the subject's head was slightly tilted forward and the position maintained, and the aggressor was "on the left of the fallen victim" shooting "from above and slightly forward." This is irrefutably confirmed by the following data.

1. The hematoma around the eyes and the nose "indicates that the lowest point of the head, where the blood drained when the subject was alive, was the upper region of the face, that is, the point of support on the floor was this area.

2. The wound on the forehead (20 by 25 mm [0.78 x 0.98 in]) corresponds to the exit hole of the bullet that entered close to the ear, as confirmed in expert report 72/78, showing that the bullet was deformed when exiting. This indicates that the subject's head was resting on the floor, since the bullet was deformed before exiting when it clashed against the resistance opposed by the bone and the floor (written by the plaintiff: "Partial dispute – Explanations Reservations," pages 99/105).

3. This last bullet travelled "from behind and went forward, from the bottom upwards, and from left to right" (Autopsy N° 2.3.78).

Moreover, with the same certainty, we can say that this last bullet was shot from a short distance to finish him off. This is fully demonstrated by the fact that only in the wound situated close to the left ear (entrance hole) can "a scant amount of medium size, small, and fine blackish gunpowder grains be observed" in the microscope (page 134).

The plaintiff refuted the actions of the experts and requested their explanations. The subsequent answer of the forensic physicians proved insufficient and contradictory. Moreover, a serious aggravating point illustrated their partiality: they went so far as to want to modify their (legal) report in regards to the amount of time Bonet survived. Yet, they offered no new item of evidence even when it had ceased to be procedurally applicable for them to do so, because that conclusion "was not only not questioned, but also accepted by the implicit agreement of both parties" (Written by the plaintiff: "Reiterates dispute." Pages 146/back of 153). The Court decided to consider this last presentation when passing sentence.

In responding to the expert points, the forensic physicians tried to cover the existence of a finishing shot, which undoubtedly emerged from the own data of the autopsy

they had undertaken. They argued that there were no finishing shots only because of the absence of what is known in medical-legal terms as "Hoffman's star-like pattern". This lesion characteristically appears when the weapon is in contact with the skin and there is a bone plane underneath. Later on, and in response to the plaintiff's demand that they explain if an indispensable requirement for a finishing shot is that it be done with the gun in contact with the skin, they had no other choice but to recant, thus acknowledging that their only argument to rule out the finishing shot had absolutely no validity.

RUBEN PEDRO BONET Informe de la necropsia

La viuda de Bonet demanda al Estado por el homicidio de su esposo, se inicia así el juicio caraturado "LELCHUK de Bonet, Alicia Noemí c/ ESTADO NACIONAL (Comando en Jefe de la Armada) s/daños y perjuicios", radicándose en el Juzgado de Primera Instancia en lo Federal, en lo Civil y Comercial Nº 6 a cargo del Doctor Jorge O. Arana Tagle, Secretaría Nº 18, a cargo de la Doctora Elsa Beatriz Guerisoli. A pedido de la demandante y por resolución del Juez se ordena la realización de la autopsia del cadáver.

Pergamino, 20 de octubre de 1972. Se procede a exhumar los restos de Rubén Pedro Bonet. Sobre el cajón sólo hay algunas flores y dos cartas de sus hijos garabateadas con dibujos infantiles, firmada Mariana y Hernán.

207

La exhumación es presenciada por personal policial uniformado que custodia el féretro en su traslado, hasta la Capital Federal.

El día 26, los Doctores Jacinto Ignacio Pagliera y Mariano Manuel Balverde, Médicos Forenses de la Justicia Nacional, hacen la autopsia de Rubén Pedro Bonet. Al solo efecto de presenciar el acto, asiste el Doctor Rolbider Feola, anátomo patólogo designado por la Sra. de Bonet.

Del informe necrópsico confeccionado por los peritos se desprenden los siguientes puntos fundamentales: (Autopsia N^{\circ} 2378; fs. 72/78 de los autos ya mencionados).

1. Cadáver en avanzado estado de putrefacción.

2. Herida de bala en el pecho y brazo derecho.

3. Disparo en abdomen que entra cerca del ombligo y sale por atrás a través de un orificio ubicado del mismo lado y aproximadamente en la misma altura.

4. Hematoma alrededor de ambos ojos y nariz.

5. Disparo en la cabeza que entra cerca de la oreja izquierda y sale por encima de la ceja del mismo lado.

6. "Muerte inmediata por lesión cerebral" (fs. 78) (Conclusión "d" de la Policía).

Los resultados de la autopsia y especialmente los datos mencionados, permiten afirmar con absoluta certeza que la posición del agresor en los disparos de pecho, brazo y abdomen es diferente en relación a la de la herida de la cabeza. Las primeras son heridas sucesivas con el individuo en posición de pie. Estos disparos con el agresor colocado a la izquierda y por delante de la víctima, lo hacen girar hacia la derecha y caer al suelo. El último disparo, el cefálico, es recibido estando el sujeto con la cabeza ligeramente flexionada hacia adelante y permaneciendo en esa posición con el agresor "sobre el lado izquierdo de la víctima caída" disparando "desde arriba y ligeramente hacia adelante". Esto se comprueba de manera irrefutable por los siguientes datos.

1. El hematoma alrededor de los ojos y en la nariz "indica

que el punto más bajo de la cabeza hacia donde ha escurrido la sangre con el sujeto en vida ha sido la zona facial superior, es decir que el punto de apoyo en el piso es esta zona".

2. La herida de la frente (20 por 25 mm.) que corresponde al orificio de salida de la bala que entró cerca de la oreja, según consta en la pericia 72/78, indica que el proyectil estaba deforme a su salida. Esto indica que el sujeto tenía su cabeza apoyada sobre el piso, puesto que el proyectil se deformó antes de salir al chocar contra la resistencia opuesta por el hueso y el piso,. (Escrito por la actora: "Impugnación parcial - Explicaciones Reservas" fs. 99/105).

3. La trayectoria de esta última bala "ha sido de atrás a adelante, de abajo a arriba y de izquierda a derecha" (Autopsia Nº 2.3.78).

Y con la misma certeza podemos decir que este último tiro fue efectuado a corta distancia para rematarlo. Esto queda plenamente demostrado por el hecho que únicamente en la herida situada cerca de la oreja izquierda (orificio de entrada) al microscopio "se observa escasa cantidad de granos de pólvora de tamaño mediano, pequeños y finos de color negruzco" (fs. 134).

La actuación de los peritos fue impugnada por la demandante, solicitando explicaciones a los mismos. La repuesta posterior de los médicos forenses resultó insuficiente y contradictoria, y con un serio agravante que es ejemplo de su parcialidad: llegan al extremo de querer modificar su dictamen en lo referente al tiempo de sobrevida de Bonet sin tener ningún elemento nuevo de juicio, y cuando procesalmente ya no correspondía que lo hicieran porque esa conclusión "no sólo no fue cuestionada, sino que fue aceptada de conformidad implícita por ambas partes" (Escrito de la actora: Reitera impugnación". fs. 146/153 vta.) A esta última presentación el Juzgado resolvió tenerla presente para el momento de la sentencia. En la contestación a los puntos de pericia, los forenses pretendieron encubrir la existencia del tiro de gracia, que surgía

209

sin lugar a dudas de los propios datos de la autopsia por ellos efectuada. Alegaron que no hubo tiros de gracia únicamente porque no se había producido lo que en términos médico-legales se denomina "Golpe de Mina de Hoffman". Esta es una lesión que aparece característicamente en aquellos disparos que se efectúan con el arma abocada a la piel, cuando hay un plano óseo por debajo. Con posterioridad, y ante la exigencia de la demandante de que explicaran si es requisito indispensable para el tiro de gracia que se realice con el arma abocada a la piel, no tuvieron más remedio que retractarse, reconociendo así que su único argumento para descartar el tiro de gracia carecía en absoluto de validez.

La prueba definitiva de que los sucesos de Trelew no constituyeron una fuga, como se pretendió hacer creer mediante engaños a la opinión pública, la dan, además de las categóricas razones enunciadas, los propios peritos.

El certificado de defunción de Rubén Pedro Bonet indica que su muerte se produjo a las 12.55 horas del día 22 de agosto de 1972. El supuesto intento de fuga según la versión oficial ocurrió a las 3,30 de ese mismo día. La autopsia, como se ha señalado, afirma que Bonet murió en el momento mismo de recibir el último disparo en la cabeza (muerte inmediata por lesión cerebral). De lo expuesto por los peritos oficiales en la pericia surgen dos únicas alternativas posibles:

 a) Que el certificado de defunción es un documento público falso.

b) Que Bonet fue ultimado 9 horas después de haber sido herido.

EXHIBIT 8

The corpse of Susana Lesgart was first examined by her brother, Dr. Rogelio Lesgart, and two of his colleagues on August 23 in the sixth police section of the Province of Córdoba. This examination was carried out for identification purposes and only entailed opening the metallic part of the coffin that covered the head. On that occasion, Dr. Lesgart observed the considerable degree of bloating of the face and eyelids of a person he recognized as his sister, Susana. At the same time, through such a precarious opening, he managed to see a bullet hole in the front of the left hemithorax, with an area that seemed to him a tattoo, that is, an indication that such bullet had been shot from a distance of no more than 30 cm [11.8 in]. He decided, therefore, to postpone the next examination, which required opening the metallic cover completely. As the technicians of the Despontin House explained to him, it would be impossible to close the coffin adequately once the metallic cover had been fully opened, so the coffin would have to be replaced.

In the early hours of August 24, with Dr. Eduardo Ricardo Yofre and two employees of the Despontin Funeral House, the coffin was opened completely and the lifeless body of Susana Lesgart was examined. These were the findings:

- 1. The face and the neck showed a marked degree of bloating and cyanosis, which contrasted with the normal cadaveric pallor of the rest of the body. There was evidence of bleeding from the nose and both ears. The hair on the back of the skull presented a great amount of clotted blood that made it impossible for us to determine if the origin of the blood was in the vicinity, or if it came from a distant site. When trying to reduce the palpebral edema in order to see the eyeball from the inside, we noticed that the swelling was the product of subcutaneous emphysema, with a certain degree of tension as decompression was followed by the immediate restoring of the emphysema.
- 2. There were five bullet holes in various parts of the body, as we will detail below, with different types of edges, be it because they were entry and exit bullet holes, or because they were shot by different weapons. A non-physician person who helped move the corpse said he had observed a sixth hole in the right lumbar fossa.

The detail of the holes is as follows:

- 3. Bullet hole at the height of the second intercostal space close to the left sternal border, of sharp contour and an approximate diameter of 0.8 cm [0.31 in]. Next to it, above its left border, an area of about 2.5 cm by 2 cm [0.98 in x 0.78 in] was observed, and looked like a necrotic skin lesion, black and cardboard-like, suggesting the same shot as the cause. In that case, it could have been a shot from a distance of no more than 30 cm [11.8 in].
- 4. In the right lower quadrant of the abdomen, another bullet hole of similar size and characteristics to the above was leaking gas, which we interpreted as originating in an intestinal perforation.
- 5. On the upper section of the left shoulder, two bullet holes differed from those already mentioned in that their borders were irregular and they were larger than the above.
- 6. We discovered the fifth bullet hole in the inner part of the left arm, about six cm [2.36 in] underneath the axillary fold and with an irregular edge like those of the shoulder. We mention that a non-physician observer noted another hole he placed in the right lumbar fossa. However, given the difficult conditions in which the examination was undertaken, we did not see it.
- 7. Lastly, the hands and part of the body showed remains of the black ink habitually used for the purpose of fingerprint individualization. Due to its presence, we were especially careful in trying to remove it in order to touch the necrotic area described in clause 3, confirming that it was not a spot produced by this ink, but rather a lesion with the characteristics we have described. With the assistance of the two employees of the Despontin House, we placed the corpse of Susana Lesgart in a new coffin. The technician immediately proceeded to weld the metallic lid closed.

El cadáver de Susana Lesgart fué examinado en primera instancia el día 23 de Agosto, en la seccional sexta de la policía de la provincia de Córdoba, por su hermano el Dr. Rogelio Lesgart, en compañía de dos colegas. Este exámen sólo se efectuó destapando la parte metálica del féretro correspondiente a la cabeza, con propósitos de identificación. En esa oportunidad el Dr. Lesgart pudo comprobar un considerable grado de abotagamiento de la cara y párpados de una persona a quien reconoció como su hermana Susana. Simultáneamente, por esa precaria abertura, logró ver un impacto de bala en la cara anterior del hemitórax izquierdo, ..compañada de una zona que le impresionó como de tatuaje, vale decir, como indicativa de que el mencionado impacto habría sido efectuado desde una distincia no mayor de 30 cms. Resolvió por tanto posponer un exámen ulterior, ya $_4$ ue este al demand $_4$ r la completa apertura de la tapa metálica, acarrearía la necesidad de substituir el féretro por otro, por la imposibilidad de logmer un cierre adecuado según manifestaron los técnicos de la casa Despontin.-

El 24 de Agosto, en horas de la madrugada, y acompañado por el Dr. Eduardo Ricardo Yofre y dos empleados de la empresa de pompas fúnebres Despontin, se procedió a destapar completamente al féretro y a examinar el cuerpo sin vida de Susana Lesgart. Estos fueron los hallazgos: l. La cara y el cuello presentaban un marcado grado de abotagamiento y cianosis, que contrutaba con la palidez cadavérica normal del resto del cuerpo. Había evidencia de hemorragia nasal y de ambos conductos auditivos. El cabello sobre la cara posterior del cráneo, mostraba gran cantidad de sangre coagulada, resultandonos imposible precisar si la procedencia de la misma era de la vecindad, o si provenía de algun punto alejado. Al intentar reducir el edema palpebral para observar por dentro el globo ocular, constatamos que el abotagamiento era producido por enfisema subcutáneo, con cierto grado de tensión ya que la descompresión era seguida por la inmediata restitución del enfisema.

2. Presentaba cinco orificios de heridas de bala que como los iremos de tallando se encontraban a distintas alturas del cuerpo, y mostraban diferencias en el caráoter de sus contornos, sea por tratarse de orificios de entrada y salida de los proyectiles, sea por que pudieran haber sido producidos por armas de diferente clase. Una persona no mé> REDMINOUES a la movilización del cadáver, dijo haber observado
> ALDUAL CAMERA en la fosa lumbar derecha.

El detalle de los impactos es el siguiente:

- 3. Impacto de bala a la altura del segundo espacio intercostal izquierdo proximo al borde esternal, de contorno nítido, de un diámetro aproximado de 0,8 cme. Junto a él, sobre su borde izjuierdo, se vé un área de unos 2,5 cms por 2 cms., con el aspecto de una lesión necrótica de piel, de color negro y consistencia acartonada, sugestiva de haber side producida por el mismo impacto. En tal caso, podría tratarse de un dispare efectuade a una distancia no superior a los 30 cms.
- 4. En el cuadrante inferior derecho del abdomen, otro orificio de bala, de similares dimensiones y características al descripto _nteriormente, por el cual resumaba gas, que interpretamos como producido por perforación intestinal .-
- 5. Sobre la cara superior del hombro izquierdo, tenía dos orificios de bala, diferentes a los dos mencionados ya, pues sus bordes erun irregulares y de un tamaño mayor que el de los ya descriptos.
- 6. El quinto impacto lo descubrimos sobre la cara interna del brazo izquierdo a unos seis oms. por debajo del pliegue axilar, y de contorno también irregular como los del hombro. Hacemos mención a lo anotado por un observador no médico sobre la presencia de otro orificio que describe como situado en la fosa lumbar derecha, pero que nosotros no vimos, por las dificultades del exámen bajo las condiciones en que fué realizado.
- 7. Por último, señalamos que las manos y parte del cuerpo presentaban restos de la tinta negra que suele ser usada con fines de identificación dactiloscópica. Por su presencia, tuvimos especial cuidado de tr_tar de borrar, y por tanto palpar la zona necrótica descripta en el apartado 3, ratificando que no se trataba de una mancha producida por dicha tinta, sino de una lesión con las características descriptas.-Con la ayuda de los dos empleados de la casa Despontin, colocamos el cadáver de Sus na Lesgart en un nuevo ataud, procediendo de inmediato el técnico al cierre mediante soldadura de su tapa metálica.-

> Today, the corpse of Miguel Angel Polti (junior) was examined inside the coffin. We observed three bullet holes in the following places: one in the left shoulder, supraclavicular; another one in the left inguinal region, almost at the level of the fold of the same name; and the third one on the left side of the abdominal region, in the area of the flank, approximately at the height of the navel. Since the examination was incomplete, no other details were observed and no exit holes were noted; the back of the corpse was not observed, as it would have meant taking the corpse out of the coffin.
